- **The L'OCCITANE Group is fully committed to respecting and protecting the environment. We aim to limit our impact on the environment at every stage of the product lifecycle, from formulation through to distribution.**
- In France, where the majority of our products are manufactured, our efforts towards using renewable energy are very advanced.
- As an international multi-brand group, however, reducing our global impact is more complicated as we have different systems in each market.
- We will use the best practices learnt in France to inspire and propel our efforts on a global scale.
- **1<sup>st</sup> action plan to reduce our electricity consumption by installing 100% LED lighting in L'OCCITANE owned stores:**
  - Objective: to reach 100% LED lighting in L'OCCITANE owned stores by 2020.
- **2nd action plan to supply renewable electricity as the energy source:**
  - All of our factories and owned stores in France now use 100% electricity from renewable sources.
  - Our UK stores are starting to switch and will complete the transition over the next 3 years.
  - Objective: to reach 80% of renewable energy across our global business by 2020.
